## Ni-Co 基鍛造/粉末冶金合金の開発

Development of Ni-Co base Wrought Alloys and P/M Alloys

Ni基およびCo基超合金をベースとした2種類の $\gamma/\gamma'$ 相組織を高度に融合させる新しい合金設計概念

We propose a new concept to design new turbine disc alloys by mixing the  $\gamma/\gamma'$  systems of Ni-base with those of Co-base.

従来のU720Li鍛造合金より70°C耐用温度向上した新ディスク合金を開発

Temperature capability of our new disc alloys have 70°C benefit compared with that of U720Li alloys.
